

Clean Pond

The compound beneficial micro-ecological agent to clear water. For Various aquatic animals (seawater and fresh water like fishes, shrimps, crabs, shells and sea cucumbers).

Indication:

- Effectively removes Ammonia nitrogen and Nitrate.
- Balance PH Value and Algae.
- Increases DO (dissolving oxygen).

Dosage:

Use 400 to 900 gm Clean pond /1000 m² with one meter deep water. Acc. to level of pollutionn.

OX-Boost

Sodium per carbonate, slow-release co-solvent, stabilizer, synergist.

Apply to every kind of water and farming mode.

Indication:

Increases the DO (dissolved oxygen) last for 6 hours. And gives the necessary natural nutritions for pond water.

Dosage:

- Use 500 gm OX-Boost / 1000m².
- For emergency treatment that aquatic animals hypoxia use 600 gm OX-Boost / 1000 m².

Humo-pro

Humic acid and Bacterial agent.

Apply to Many kind of Aquaculture.

Indications:

- prevention of infection of internal organs such as liver , kidney , and spleen.
- Increase soluble oxygen in water.

Dosage:

250 gm Humo-pro/ 4000 liter of (acre) pond.

HBMAX

Humic acid, Coated Sodium Butrate, Several Minerals and calcium carbonate.

Apply to Many kind of Aquaculture.

Indications:

- Growth promoter.
- Immuno stimulant.
- Increase fertility.

Dosage:

0.5 to 1 kg HBMAX /ton Extruded feed.

Micro pond

Bacillus subtilis, Rhodo pseudomonas palustris, thio bacillus, nitrifying bacteria, denitrifying bacteria, rich active enzymes.

Apply to shrimps and domestic or industrial waste water.

Indication :

- Accelerates the decomposition of organic material in water.
- Promotes the growth and breeding of the beneficial alga.
- Maintains the ecosystem balance of the water.

Dosage:

- For the shrimp Culturing pond: use micro pond 0.45 to 0.75 ppm.
- For the Domestic or Industrials waste water fishing pond: 3 ppm. Two weeks before putting the seeds.
- For the seeds breeding pond: 1 to 3 gm/ cubic meter twice per day.

Humo-vib

Mixture of Humic acid, Capric acid and Caprylic acid.

Apply to Many kind of Aquaculture.

Indications:

- increase the weight of the fish with average 5-10%
- Immuno-stimulant
- Prevention of bacterial and mycotic infection of skin, gills and fins.

Dosage:

250 gm Humo-vib / 4000 liter of (acre) pond.

BOOSTRED-F

Yeast Cell wall (Saccharomyces cerevisiae), Beta glucan, Mannan oligosaccharide, Silymarin and Bentonite

Apply to Fish, shrimps, shells and sea cucumbers .

Indications:

- Detoxification of feed contaminated with mycotoxins.
- Hepato protective and decrease the effect of toxins on liver.
- Increase in feed efficiency.

Dosage:

0.5 kg BOOSTRED-F/ton feed.
